DNS
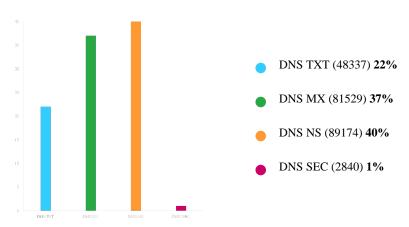

The domain Name System (DNS) is a naming system for doamin names. It translate domain names to numerical IP address.

DNS type

- DNS TXT (48337) **22%**
- DNS MX (81529) **37%**
- DNS NS (89174) **40%**
- DNS SEC (2840) **1%**

DNS TXT

Dataprovider.com does not only index the website, we also index the DNS records. For each domain we collect the A(IPv4), AAAA coverage of these records in the zone file.

- SPF (1) **0%** Sender policy framework records are to prevent fake emails.
- Verification (4065) **2%** Used to add to the domain host's DNS records
- DKIM (5) **0%** Provides a method for validating a domain name identity.
